FALL PREVENTION PROGRAM

Course Description:

This 7-hour course is designed for therapists who intend to perform screening, examination, and treatment intervention management of older people who are at risk for falls or who have fallen. Current evidence-based practice will be explored and discussed to transition into a practical and useable format through lectures, problem-solving, case studies, video experiences, and interactive discussions.

Learning Objectives: By the end of this course Participants will be able to:

1. Understand and relate the principles of examination, differential diagnosis, fall prevention, and specifics of a Fall Prevention Program to other team members, families, and older adults with whom you serve.
2. Skillfully and reliably apply the flow, testing and exercise techniques and progression of the Fall Prevention program in your practice setting.
3. Participate in case studies to integrate the Fall Prevention Program into your existing setting
